Warnings

The Tests for Homogeneity of the Odds Ratio table and the Mantel-Haenszel Common Odds Ratio Estimate table are not computed for usia * PGK, because either (1) the group variable does not have exactly two distinct non-missing values or/and (2) the response variable does not have exactly two distinct non-missing values.

No measures of association are computed for the crosstabulation of usia * PGK. At least one variable in each 2-way table upon which measures of association are computed is a constant.
