## ABSTRACT

**M.FERDIAN LUTHFI, 71190311046, INEQUALITY ANALYSIS OF INCOME DISTRIBUTION OF TRADE COMMUNITIES IN SUKA MAJU VILLAGE, MEDAN, JOHOR**

*The business conditions of traders with a relatively high income uncertainty factor have a great impact on the level of welfare and inequality that occurs in the community. The amount of income between merchant communities is different even though the characteristics of their businesses are also different. Inequality of income between communities can indicate an inequality in the level of welfare among traders in that community group. The number of respondents selected to be sampled was 60 traders, which was carried out proportionally. The level of inequality in the distribution of income from traders in the Suka Maju sub-district, Medan, Johor is measured by the Gini Ratio value of 0.5858 rounded off to 0.6 in the category of high income distribution. the average sum of all traders' income is Rp. 221,500,000 million. Because the income of traders varies from the smallest Rp. 500,000 to Rp. 10,000,000 million.*

*The factor of the level of inequality in the income distribution of the population of Kelurahan Suka Maju Medan Johor has a significant influence on the economic growth rate of Medan Johor with a positive coefficient. The income distribution gap as measured by the Gini ratio runs in the same direction as the rate of economic growth in the Suka Maju sub-district, Medan, Johor. The higher the level of income inequality, the economic growth in North Sumatra Province will also increase.*
