Penelitian ini bertujuan untuk mengetahui kelimpahan *ocypodidae* (Kepiting hantu) dikawasan daratan hutan mangrove di desa pematang kuala, Untuk mengetahui bagaimana ciri ciri *ocypodidae* kepiting hantu dikawasan hutan mangrove di desa pematang kuala. Populasi dalam penelitian ini adalah seluruh hewan kepiting hantu yang terdapat dikawasan hutan mangrove desa pematang kuala dengan menggunakan metode ekologi darat yang dibagi menjadi dua plot penelitian hasil penelitian terhadap kelimpahan jenis kepiting hantu diproleh 3 spesies, 3 filum, 3 kelas , 3 ordo, 2 family , 3 genus. Pengukuran lingkungan suhu rata rata 29-31 celcius, Ph rata rata 7-8 salinitas rata rata 23-20% dan subsrat adalah lumpur bertekstur. Yang medominasi Kawasan di daratan hutan mangrove dusun V pematang kuala kecamatan teluk mengkudu kabupaten sedang berdagai *Malacostraca*. Nilai kelimpahan kepiting hantu 93% pada plot I, pada plot II 0,92% dikategorikan sedang berdasarkan hasil tersebut Kawasan daratan hutan mangrove dusun V desa pematang kuala kecamatan teluk mengkudu kabupaten deli Serdang.

Kata kunci : Kelimpahan, Ocypodidae , Hutan Mangrove

ABSTRACT

ABUNDANCE OF OCYPODIDAE (GHOST CRAB) IN MANGROVE, PEMATANG KUALA VILLAGE FOR MAKING REFERENCE BOOKS
